Mission

Moz HealthCare's mission is to modernize healthcare in Africa through a unified digital platform that connects patients, clinics, laboratories, and insurance companies in one ecosystem. We aim to reduce administrative burdens, eliminate scheduling inefficiencies, and enhance transparency in medical claims.

Market Opportunity

Healthcare access in Africa is rapidly digitizing, but fragmented systems still dominate. Clinics rely on manual appointment scheduling, patients struggle to access records, and insurance claims are slow and paper-based. Moz HealthCare addresses a multi-billion-dollar market by offering a scalable, cloud-based, all-in-one platform designed for African clinics, labs, and patients.

Product Overview

Public App: Patients can view doctor availability, book appointments, check lab results, submit insurance claims, and track claim status. The app provides transparency and convenience with a user-friendly interface.

Clinic App: Clinics can manage appointments, medical staff, patient records, inventories, and finances — all from a centralized dashboard. It enables full visibility into operations and financial performance.

Unique Value Proposition

- Two connected frontends (Public & Clinic) sharing the same secure database.
- Integrated insurance claim management.
- Laboratory test booking and results tracking.

- Streamlined clinic finances and inventory control.
- Scalable for future integrations (e.g., telemedicine, mobile payments).

Growth Plan

- **Phase 1 (2025):** Launch pilot in Mozambique with 5–10 clinics and 2 major insurers.
- **Phase 2 (2026):** Expand regionally with multilingual support and cross-border insurance integrations.
- **Phase 3 (2027+):** Monetize through subscriptions, transaction fees, and data insights services.

Contact & Partnerships

We're currently seeking strategic investors and partners to help us scale across Africa's growing healthcare technology market.
